

Please reject the National Association of Broadcasters' petition 04-160. I have chosen to subscribe to satellite radio because of the diversity of programming. A key element to that diversity is the availability of certain local information, such as traffic and weather. Satellite radio gives me that information, plus, news and entertainment, when I want it, not "at the top of every hour" or after an endless line of commercials. The NAB supports a product that is long overdue for an overhaul, but they have no plans to change and accomodate the millions of listeners they've turned away.
